“If you can’t explain it simply
you don’t understand it well enough.”
Albert Einstein

Profile

The web is becoming an increasingly complex and lively communication tool. I approach front-end development by first understanding the complexity of the problems, then reducing them a series of clear, user-focused messages. I strive to apply this philosophy to all my work. I’ve had 6 years experience working at a global IT infrastructure consultancy to develop a focus on creating cutting-edge web apps with excellent user interface and experience.

Qualities

- Advanced skills in HTML, CSS3 and Javascript ES6
- Focused on modern frameworks (such as React)
- Accustomed to the Agile Method
- Excellent design skills
- An experienced improviser and self-teacher
- A profound attention to detail

6 years at CGI Group (2012-2018)

Key Experience

- Building data visualisations with D3 and Power BI
- Building visual reporting tools for use across large scale projects
- Worked on large scale project environments
- Worked in Agile teams
- Keeping in close contact with clients throughout development
- Completed a 1st BA Degree in 3 years while a full-time employee at CGI

Clients I have worked for:

- The Environment Agency - Future Flood Forecasting System weather visualisations
- UK Smart Meter Programme - System testing industry reports
- CGI Digital Analytics Platform - Client data web portal
- The Ministry of Defence - Internal web portal
- Shell Fuel-card system - Payment UI

Studied at University of Winchester (2012-2015)

1st BA(Hons) in Business IT Management
